

# A Complete Cloud and Network Security Solution

## WatchGuard Dimension + ManagedMethods Cloud Access Monitor

### WatchGuard Dimension Integration with ManagedMethods Cloud Access Monitor

WatchGuard and ManagedMethods have formed a partnership to deliver complete visibility and control into SaaS applications, extending beyond the network perimeter.

The integration of the ManagedMethods Cloud Access Monitor with WatchGuard Dimension™ provides industry-leading SaaS security for small to midsize organizations and distributed enterprises.

Using API integrations, IT security teams now have complete control and visibility into the most popular SaaS applications, including Office 365, Google Apps, Box, Dropbox, and Salesforce.

### The Challenge

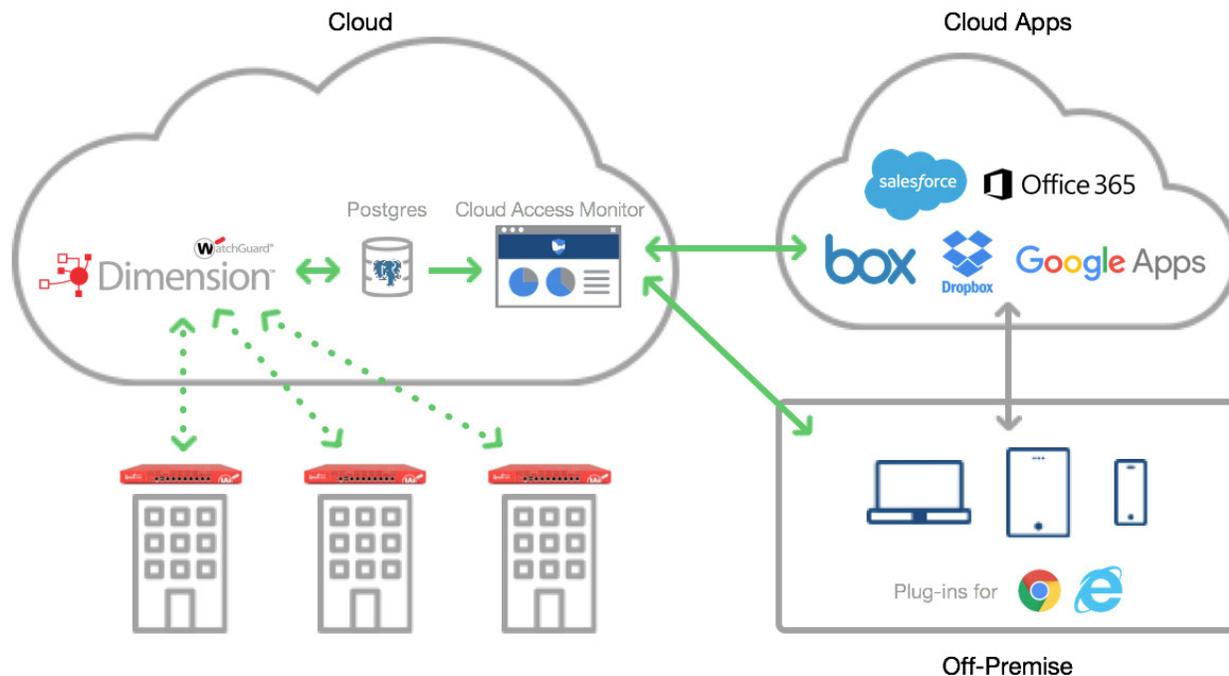

Companies today are dealing with ever-increasing threats from cyber attacks while challenged with the need to safely leverage cloud services. It's no secret that Cloud application (SaaS) usage is on the rise now that these applications are readily available throughout the enterprise. Sensitive data moves freely between the enterprise and the cloud, and IT security teams are struggling to maintain control, prevent data loss, and reduce risk. The use of both sanctioned and unsanctioned cloud apps has created an intensified risk of data leaks, malware attacks from suspicious cloud providers, and the critical visibility and security issues of Shadow IT and Shadow Data.

Detecting and investigating network security and cloud application risks is now simplified with the integration of ManagedMethods CASB solution, Cloud Access Monitor, with WatchGuard Dimension, a cloud-ready visibility and management platform.

### An Integrated SaaS Security Solution

The integrated architecture of Cloud Access Monitor with Dimension provides IT security professionals with complete visibility and control into all network traffic and cloud application usage.

-  **Visibility** into cloud application usage beyond the perimeter of the network, including Office365, Google Apps, Box, Dropbox, and Salesforce.
-  **Data Loss Prevention** with 24/7 monitoring of risky behavior or sensitive data activity with customizable alerts.
-  **Threat Protection** against malware and outside attacks.
-  **Compliance monitoring and reporting** for PII, PCI HIPAA, and other regulations.

### About WatchGuard Technologies

WatchGuard® Technologies, Inc. is a global leader of integrated, multi-function business security solutions that intelligently combine industry-standard hardware, best-in-class security features, and policy-based management tools. WatchGuard provides easy-to-use, but enterprise-grade protection to hundreds of thousands of businesses worldwide.

### About ManagedMethods

ManagedMethods develops Cloud Access Security (CASB) solutions that provide organizations visibility and control over Shadow IT and sanctioned cloud apps. Founded in 2013 by industry veterans of the enterprise security and performance software markets, ManagedMethods' products focus on the growing use of cloud applications and services that are at the core of today's mission-critical business functions.
