

CHECK POINT+ MANAGEDMETHODS

COMPREHENSIVE DEFENSE AGAINST CLOUD-BASED THREATS

Benefits

- Implement audit and control of sanctioned cloud applications
- Defend against email-based threats in Gmail and Office 365 Email
- Uncover shared documents that contain sensitive information
- Extend security policies beyond the network perimeter with cloud-native APIs
- Support consistent, granular DLP policies across on-premise and cloud applications
- Gain visibility into sanctioned and Shadow IT cloud application usage, including behavioral analysis of user activity over time
- Detect and defend against cloud-based malware attacks

Supported Applications:

INSIGHTS

Companies today are dealing with ever-increasing threats from cyber attacks while challenged with the need to safely leverage cloud services for improved productivity and collaboration. It's no secret cloud application (SaaS) usage is on the rise now that these applications are readily available throughout the enterprise. Sensitive data moves freely between the enterprise and the cloud. But as soon as that data leaves the corporate network, most IT security teams struggle to maintain control, prevent data loss, and reduce risk. This use of both sanctioned and unsanctioned applications, including cloud-based email, has created an intensified risk of data leaks and malware attacks. Organizations need better visibility into their employees' use of all cloud applications and a way to control the use of unsanctioned 3rd party applications and Shadow IT applications.

JOINT SOLUTION

ManagedMethods and Check Point Software have formed a partnership to deliver comprehensive security for cloud application control. The combination of these two leading security solutions ensures high-performance cloud application security to address rapidly evolving threat landscapes. The joint solution combines ManagedMethods' Cloud Access Security Broker (CASB) product, Cloud Access Monitor, with Check Point's Next Generation Threat Prevention technologies, including SandBlast™ Zero-Day Protection and DLP Software Blade. Now IT security professionals can have complete visibility, compliance, threat protection and data loss prevention for their network and cloud applications.

HOW IT WORKS

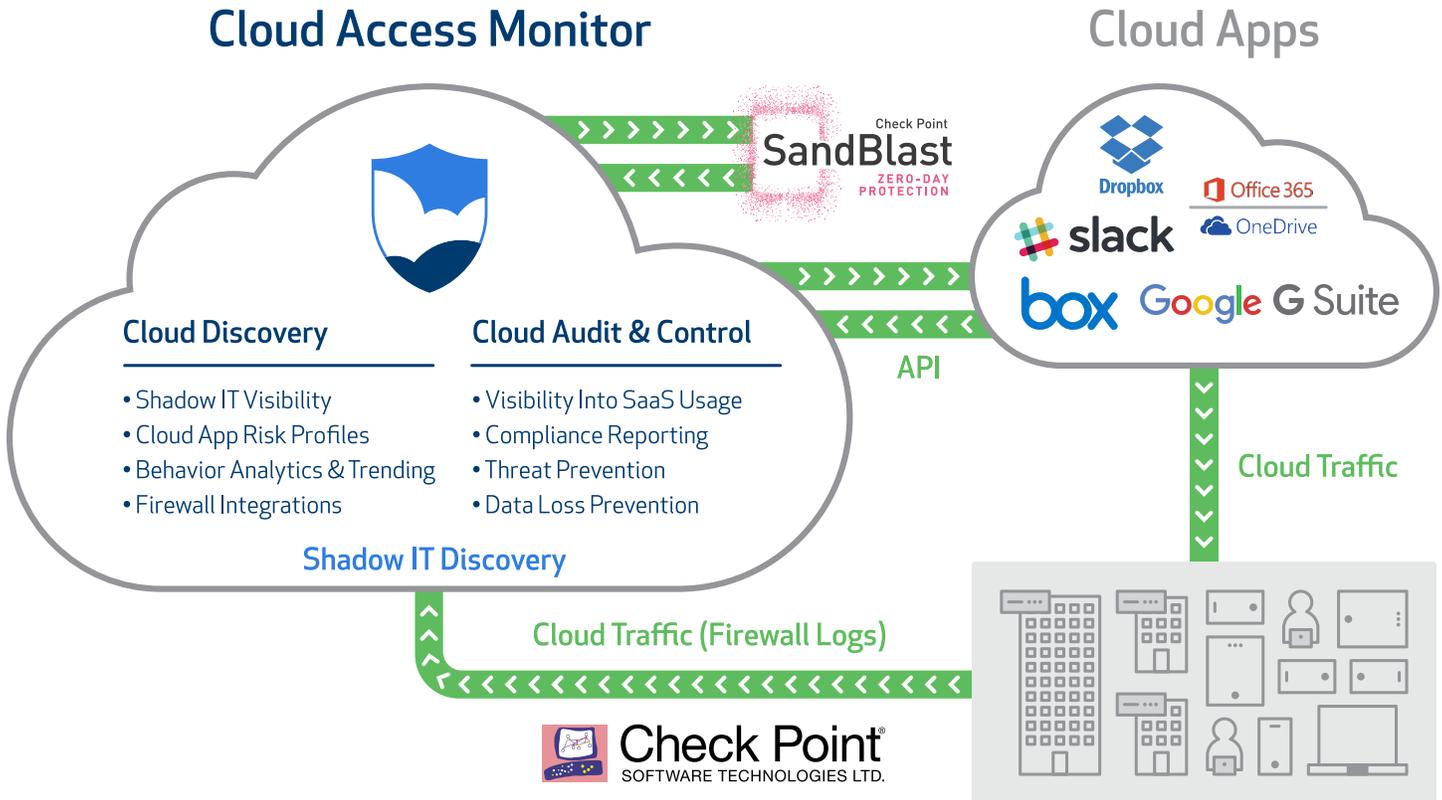

On a corporate network, the Check Point Next Generation Firewall secures and protects the corporate network, while Cloud Access Monitor extends the corporate security policy, providing visibility, audit, and control of how cloud data is stored, accessed and shared in popular cloud collaboration applications, including Google G Suite, Microsoft Office 365, OneDrive, Dropbox, Box, and Slack.

Cloud Access Monitor also provides critical visibility into Google Gmail and Microsoft Office 365 Email, with an added layer of defense provided by Check Point's SandBlast™ Zero-Day Protection to prevent email-based security threats. Now IT professionals have the ability to eliminate one of the most common sources of cloud security risks.

The integrated solution also leverages Check Point's DLP Software Blade to combat data loss by monitoring both the network perimeter for suspected breaches, as well as detecting risks such as unsafe file sharing links, PII or confidential information in documents or malware infected files.

A BETTER APPROACH TO CLOUD SECURITY

The Check Point and ManagedMethods joint solution defends your organization against cloud-based threats with industry-leading security solutions that make it easy to safely leverage the power and benefits of the cloud.

ABOUT CHECK POINT

Check Point Software Technologies Ltd. (www.checkpoint.com), is the largest pure-play security vendor globally, provides industry-leading solutions, and protects customers from cyberattacks with an unmatched catch rate of malware and other types of attacks. Check Point offers a complete security architecture defending enterprises' networks to mobile devices, in addition to the most comprehensive and intuitive security management. Check Point protects over 100,000 organizations of all sizes. At Check Point, we secure the future.

ABOUT MANAGEDMETHODS

ManagedMethods offers the most efficient way to gain visibility into how data is stored, accessed and shared in cloud applications such as Microsoft Office 365, OneDrive, Google G Suite, Dropbox, Box, and Slack, as well as to control unsanctioned Shadow IT applications. ManagedMethods' Cloud Access Monitor is the only Cloud Access Security Broker (CASB) that can be deployed in 30 minutes, with no special training, and with no impact on users or networks.
