

Simple, Affordable CIPA Compliance

Welcome to the future of online safety and CIPA compliance for K-12 school districts

Native Google Integration

Implement Content Filter right from your Google Workspace Admin console, plus you get automatic enrollment and updates.

Blocklist & Allowlist

Out-of-box support for over 30 website categories allows admins to easily create block and allow policies on school-issued Chromebooks and in Chrome browser.

Customize Policies By OU

Easily customize policies by your Google Workspace Organizational Unit (OU) structure.

Block Policy Page

Default block page lets users know that the website is blocked by admin policy. You can configure it to redirect to a defined URL.

Social Media Blocking

Keep students focused on learning by easily blocking social media websites, including Reddit and Subreddit blocking.

Student Safety Signals AI

Industry-leading AI built to run on the browser extension, enabling safety monitoring without disrupting the browsing experience for end users.

Safety + Security + Compliance

Content Filter by ManagedMethods is a modern, minimalist take on the web content filter. It uses browser-level URL blocking and artificial intelligence to provide student safety, security, and CIPA compliance for K-12 schools. Content Filter is easy-to-use, unobtrusive, performant, and highly scalable.

- + Developed specifically for K-12 schools
- + Integrated with Google Admin console
- + AI-powered student safety monitoring
- + Simple policy violations reporting
- + Identify lost or stolen devices

Content Filter is easy to install and manage, with customizable settings to fit your school's specific needs. Plus, it runs seamlessly in the background, so students can focus on their studies without interruption.
