Google AI image scanning	✔				
Security coverage of 3rd party OAuth based apps (ex: Slack, Dropbox)	✔				
Price	$4 user/mo				

Microsoft Office 365 is a powerful tool with collaborative capabilities for companies of all sizes. At ManagedMethods, we have built a simple, yet effective security tool that compliments the native security features in Office 365 at an affordable price.

Additional Layer of Security and Visibility

Many IT leaders mistakenly believe that their cloud data is sufficiently secured with Microsoft's native security features. In truth, if you are solely relying on Office 365 security, your company's data is likely vulnerable to data breaches, both unintentional and malicious.

ManagedMethods uses a blend of security partnerships and proprietary technology to provide Office 365 users with an additional layer of security that gives IT leaders and managers peace of mind. The platform also provides visibility and control to account activity, 3rd party application usage, and content sharing within the corporate environment.

Securing Your Office 365 Cloud Environment

Data security shouldn't stop and start at your gateway. ManagedMethods is the only cloud application security solution that secures your file sharing, email, and 3rd party applications all in one easy-to-use platform. We'll let you know what is going on within Office 365, as well as what it coming in and going out.

Gain visibility into email spoofing and malware attacks and prevent data loss in Exchange, SharePoint, and OneDrive. Using templated or customized policies, you can be assured that your sensitive data is properly secured while you're busy putting out fires elsewhere. With ManagedMethods, this security also extends beyond Microsoft supported file types to include files such as PDFs and JPGs. We also support security needs for any OAuth based applications, including G Suite, Slack, Dropbox, and Box.

Save Time Running Reports and Auditing

One of our customers, a die-hard Microsoft user, bought into ManagedMethods largely because of the amount of time we save him. The time it takes him to audit his company's O365 data and pull reports has been reduced by about a third. ManagedMethods makes auditing your cloud environment, running security reports, and understanding trends easier and less time-consuming.

Simple Pricing. Simple Management. Simply Effective.
